Figure 1 consists of three subplots, labeled (1), (2), and (3), each showing the accuracy of the proposed algorithm as a function of the number of iterations. The x-axis for all plots is 'Iterations' ranging from 0 to 100. The y-axis is 'Accuracy' ranging from 0.8 to 1.0. Each plot contains three data series: 'Proposed' (blue line with circles), 'Conjugate Gradient' (red line with triangles), and 'Least Squares' (green line with squares). In all cases, the 'Proposed' algorithm achieves the highest accuracy, followed by 'Least Squares', and then 'Conjugate Gradient'. The accuracy for all methods increases with iterations and stabilizes after approximately 50 iterations.

Figure 1 consists of three vertically stacked panels, labeled (1), (2), and (3) on the left. Each panel shows a plot of the probability distribution $P(x)$ versus x . The x-axis ranges from -10 to 10, and the y-axis ranges from 0 to 0.001. Panel (1) shows a narrow, symmetric, bell-shaped distribution centered at $x=0$. Panel (2) shows a wider, slightly skewed distribution centered at $x=0$. Panel (3) shows a very broad, heavy-tailed distribution centered at $x=0$, with significant probability mass in the tails.
